Education

SRM Institute of Science and Technology — Kattankulathur, Chengalpattu dist.
B.tech cse with specialization CyberSecurity — *june 2023 – April 2027*

- Cumulative CGPA : **8.61/10.0**

Profile Summary

student — April 2024 – Jan 2025
SRM Institute of Science and Technology — *Chennai*

- Computer Science Engineering student specializing in **Cybersecurity**, with interest in Security Operations and Incident Response as well as general software development. Skilled in network monitoring, log analysis, and threat detection using Wireshark, Nmap, Burp Suite, Splunk, Snort, and Sysmon, and experienced with Python, Java, SQL/MySQL, and basic web development (HTML, CSS, JavaScript). Seeking a SOC Analyst or software-focused internship to apply and grow these skills in real-world projects.

Skills

- **Cybersecurity:** Network Security, Incident Response, Security Documentation, Network Traffic Analysis, Log Analysis, Threat Detection, Vulnerability Identification, Risk Assessment, Basic Penetration Testing.
- **Tools:** Wireshark, Burp Suite, Splunk, Snort, Sysmon, Nmap, Tcpdump, MySQL, Git, VS Code.
- **Security Concepts:** Firewalls, IDS/IPS, OWASP Top 10, Malware Analysis, Threat Research, Mitigation Strategies.
- **Programming:** Python, Java, SQL, HTML, CSS, JavaScript.
- **Soft Skills:** Analytical Thinking, Critical Thinking, Problem Solving, Teamwork, Technical Documentation, Communication.

Certificates

Information security in coursera Certificate: **(link)**
SQL in Simplelearn : **(link)**
Python Udemy Certificate: **(link)**
Cyber security basis in udamy: **(link)**
Networking Basics in ciso: **(link)**
python for Data Science Certificate: **(link)**
WorkShop Certificate: **(link)**

Internship

Tech Journey: 45-Day Internship — June 2025 – July 2025
SRM Institute of Science and Technology (SRMIST) — *Kattankulathur, Chennai*

- Completed a 45-day internship in the Department of Networking and Communications.
- Worked on **Dynamic Analysis of Malware Behavior using Wireshark**.
- Captured and analyzed malware network traffic to identify malicious behavior and indicators of compromise (IOCs).
- Awarded a Certificate of Appreciation for successful completion.

Projects

AI-Based Intrusion Detection System (IDS) with SOC Dashboard Jan 2026 – Present

- Designed and deployed a real-time IDS using Python, Flask, and SQLite, combining Isolation Forest-based machine learning and rule-based detection to identify network anomalies such as port scanning and malicious activities.
- Built a live SOC dashboard using HTML, CSS, JavaScript, Chart.js, and Socket.IO to stream, visualize, and analyze security alerts in real time.

CyberWatch (NetViz) — Real-Time Traffic Visualization System May 2026

- Developed a full-stack, SOC-grade network monitoring system using Scapy and psutil to capture live TCP/UDP packets and dynamically map connections to local applications with a performance-optimized TTL cache.
- Built an interactive dark-theme dashboard featuring D3.js force-directed graphs for traffic visualization, real-time protocol distribution charts using the Canvas API, live filtering, and CSV log export for incident reporting.

Campus Market Management System Apr 2026

- Developed a web application with Admin and Student dashboards for task management and rewards tracking.
- Implemented role-based login and registration with persistent client-side storage using LocalStorage.
- Tech stack: HTML, CSS, JavaScript, LocalStorage.

Bike and Car Rental Management System Jan 2024 – May 2025

- Designed and implemented a MySQL backend with ER modeling, SQL queries, triggers, and stored procedures for efficient data management.
- Developed a frontend using HTML, CSS, and JavaScript with admin controls and optimized database performance.

Advanced Banking System Jan 2024 – Apr 2024

- Developed a secure banking system with account creation, transaction history, fund transfer, and balance inquiry.
- Tech stack: Java, MySQL, JDBC, and Swing.
